Object Oriented Programming

Pass Task 6.1: Case Study — Iteration 5

Overview

Object oriented programming makes best sense with larger programs. The case study will be your opportunity to create a larger program and better see how these abstractions make it easier to create software solutions.

Purpose:	Demonstrate how to use the classes created in the case study to make a command line program.
Task:	Understand the case study program and implement iteration 5.
Time:	Aim to complete this task by the start of week 7

Submission Details

You must submit the following files:

- Program source code
- Screenshot of program running

Instructions

1. Review the **Case Study Requirements** document. It outlines what you need to create.

2. For this task aim to complete Iteration 5.

Once your code is working correctly get a screenshot of the program running and submit it along with the code.

Assessment Criteria

Make sure that your task has the following in your submission:

- The program is implemented correctly based on the case study description.

- Code must follow the C# coding convention used in the unit (layout, and use of case).

- The code must compile and the screenshot show it outputting the correct details.
